## EXECUTIVE SUMMARY

The Maine Statistical Analysis Center (SAC), partnered with the Maine Prosecutors Association (MPA) to establish statewide and by-district prosecutorial data for a five-year period (2017-2021). These baseline data are for a variety of criminal cases, charges, and outcomes and this report is the first of its kind for Maine. The MPA sought to detail these baseline figures and trends in an annual report to both support the ongoing work of Maine’s District Attorneys to address serious crime through data-informed decision-making and to enable key stakeholders and the public to better understand how limited public resources are being used by their respective offices to protect and serve Mainers.

The data for this study comes from JustWare, a case management database used by each of Maine’s eight prosecutorial districts and includes all criminal cases, and their associated criminal charges, referred to the eight prosecutorial districts (Districts 1 through 8) between 2017 and 2021. Non-criminal charges and cases (e.g., civil charges, extraditions) are not included in the study. Additionally, this study primarily focuses on the adult defendant population and thus, with the exception of the data presented in the *Juvenile Cases* section of this report, all case defendants were adults aged 18 or older at the time of the offense(s). To gain a better understanding of the types of charges referred to prosecutors, as well as the outcomes associated with particular case types, Maine SAC researchers created a seven-category typology based on the Maine criminal statute associated with each charge.<sup>1</sup> Some of the categories were further divided into subcategories (i.e., subtypes).

The main body of the report presents statewide data in charts and graphs so that all readers can readily review trends and high-level findings by cases referred, individual charges, case outcomes, and juvenile cases. Then, the report offers a robust set of Appendices to provide a more granular view of the 5-years of data.

### Key Findings

The analysis brought forward case, charge, and outcome findings that can be used to inform each DAs ongoing and future prosecutorial strategies and quality improvement activities. Therefore, key findings are presented as they relate to charges, outcomes, and data quality and practices.

#### *Cases Referred and Associated Charges*

- Case referrals were directly impacted by the COVID-19 pandemic.
- Motor vehicle cases take up the largest proportion of the prosecutorial workload.
- The number of violation charges increased over the study period, while all other charge types decreased.
- Sexual assault cases were more prevalent in juvenile cases compared to adults.

---

<sup>1</sup> For a list of statutes by charge types, see Appendix F.

### *Outcomes*

- The number of declined cases drastically increased during the COVID-19 pandemic.
- Personal cases are the most likely cases to be declined for prosecution, while drugs/alcohol cases are the least likely to be declined.
- The use of deferred dispositions is heavily influenced by the prosecutorial district in which the case was referred.
- Over the course of the five-year study period, the number of cases dismissed grew by 19%.
- Nearly three-quarters of closed cases resulted in a conviction.

### *Data Quality and Practices*

- Data entry standards vary from one prosecutorial district to the next resulting in the inability to analyze certain areas of interest due to low data accuracy or a lack of data.

### Recommendations & Looking Forward

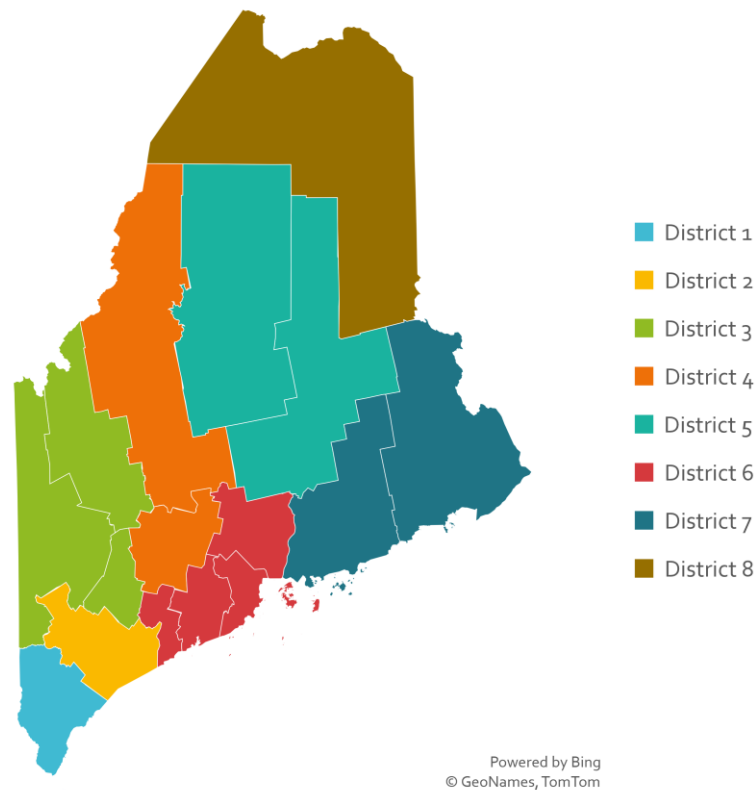

The recommendations are both specific and broad. This is because they address current prosecutorial data practices happening in Maine while also considering data practices happening nationally. The recommendations are:

1. Standardize data collection and input practices to improve data output.
2. Develop key performance indicators that emphasize the goals and values of DAs as well as the communities they serve.
3. Meet regularly with data specialists to discuss data quality and performance metrics.
4. Expand opportunities for state-wide data collaboration.
5. Develop and maintain an interactive data dashboard.

# INTRODUCTION

## Context

Maine, the 9th least populous state and the second most rural state in the United States, has eight prosecutorial districts that are each led by a popularly elected district attorney (DA) who serves a four-year term.<sup>2</sup> The eight districts' populations and geographic areas vary greatly, with the largest district having 295,000+ people in a 835 square mile area (District 2) and the least populated district having approximately 67,000 people spread out over 6,671 square miles (District 8).<sup>3</sup> As demonstrated in the map below, some Districts are comprised of a single county, while other districts are composed of multiple counties.

Each of the eight district attorneys has the responsibility and authority to both investigate and prosecute criminal offenses in their respective jurisdictions, with the notable exception of homicides and some drug cases.<sup>4</sup> DAs annually review thousands of police reports within their districts to gauge whether evidence exists to pursue criminal charges to prove the case and if it is in the interests of justice to pursue prosecution. The DAs meet monthly with the Office of the Maine Attorney General to discuss

<sup>4</sup> District attorneys and the Office of the Maine Attorney General have the responsibility and authority to prosecute drug cases.

areas of common interest, including office policies, pending legislation, prosecution strategies, and diversionary practices.

### Report Purpose

Maine DAs and their teams work together to prosecute individuals and organizations involved in criminal activity and serve victims of crime. However, while the DAs seek to address serious crime and protect and serve Mainers through data-informed decision-making, prosecutorial data (i.e., case data by year) has never been easily accessible even to prosecutors. To address this issue, the Maine Prosecutors Association (MPA) partnered with the Maine Statistical Analysis Center (SAC) to establish statewide and district level baseline figures and trends that could be detailed in an annual report and shared with key stakeholders and the public. This report is the culmination of that effort. It establishes baseline data on a variety of criminal cases, charges, and outcomes and presents statewide and by-district prosecutorial data over a five-year period (2017-2021).

Maine's DAs sought to establish baseline data so that this type of granular information could be used in quality improvement activities that enhance case outcomes, special initiative courts, and diversions. Additionally, DAs decided to generate a public-facing report to increase transparency about how cases are managed and to enable the public to better understand how limited public resources are being used by their respective offices. DAs believe this openness will support meaningful insight and dialogue about current prosecutorial justice practices as well as related data collection and data metrics practices.

### Report Overview

While the structure of this document follows that of a traditional research report, the research team intentionally organized it in a way to make the data readily accessible to DAs and to the public. Specifically, after describing the methodology used to generate the dataset and to categorize the data for analysis, the main body of the report presents statewide data in charts and graphs so that all readers can readily review trends and high-level findings by cases referred, individual charges, case outcomes, and juvenile cases.

Then, the report offers a robust set of Appendices to provide a more granular view of the 5-years of data. Appendices A-D provide tables with data by district, referral year, and other key variables that directly pair with the case, charge, outcome, and juvenile case data presented in the main chapters of the report. Moreover, specific Appendix tables are referenced throughout the main body of the report when additional context is written about but not presented in the accompanying chart or figure. Finally, Appendix E presents district-specific data tables so that DAs and their teams can review their own efforts and practices separately but in relation to the statewide trends and findings.

## METHODOLOGY

This report includes all criminal cases, and their associated criminal charges, referred to Maine’s eight prosecutorial districts (Districts 1 through 8) between 2017 and 2021. Non-criminal charges and cases (e.g., civil charges, extraditions) are not included in the study. Additionally, this study primarily focuses on the adult defendant population and thus, with the exception of the data presented in the *Juvenile Cases* section of this report, all case defendants were adults aged 18 or older at the time of the offense(s).

The data for this study comes from JustWare, a case management database used by each of the eight prosecutorial districts. While the Office of the Maine Attorney General does not use JustWare, there are some instances—for example, state drug prosecutors embedded within a district attorney’s office—where cases referred to the Attorney General’s office may have been entered into the database. Because these cases cannot be parsed out from the cases referred to district attorney’s offices, they are included with the prosecutorial district who entered the case into JustWare.

### Charge Type

To gain a better understanding of the types of charges referred to prosecutors, as well as the outcomes associated with particular case types, Maine SAC researchers created a seven-category typology based on the Maine criminal statute associated with each charge.<sup>5</sup> Some of the categories were further divided into subcategories (i.e., subtypes). The seven categories (including subcategories where appropriate) are:

1. Personal offenses (e.g., assault, domestic violence)
  - domestic violence (DV)
  - sexual assault (SA)
  - other personal offenses
2. Property offenses (e.g., theft, burglary)
3. Drugs/alcohol offenses (e.g., possession of a controlled substance, public drinking)
4. Public offenses (e.g., disorderly conduct, resisting arrest)
5. Violations (e.g., violation of conditions of release, violation of court order)
  - release violations
  - protection order violations
6. Motor vehicle offenses (e.g., criminal speeding, operating under the influence)
  - operating after suspension (OAS)
  - operating under the influence (OUI)
  - other motor vehicle offenses
7. Other offenses
  - Inland Fishery & Wildlife
  - no charging language<sup>6</sup>
  - other criminal offenses

<sup>5</sup> For a list of statutes by charge types, see Appendix F.

<sup>6</sup> A total of 5,301 charges (1.5% of all charges) had ‘no charging language’ as the description and was the highest-level charge in 3,295 cases (1.5% of all cases). In all instances, the ‘no charging language’ charge was listed as being a Class E criminal offense and thus included in the dataset. Further exploration within JustWare found that, in a subset of cases, the ‘no charging language’ description was used for non-criminal offenses (e.g., probation violations). Because the non-criminal charges are not easily distinguishable from the criminal charges, the *other offenses* charge type and the *no charging language* subtype may include non-criminal charges.

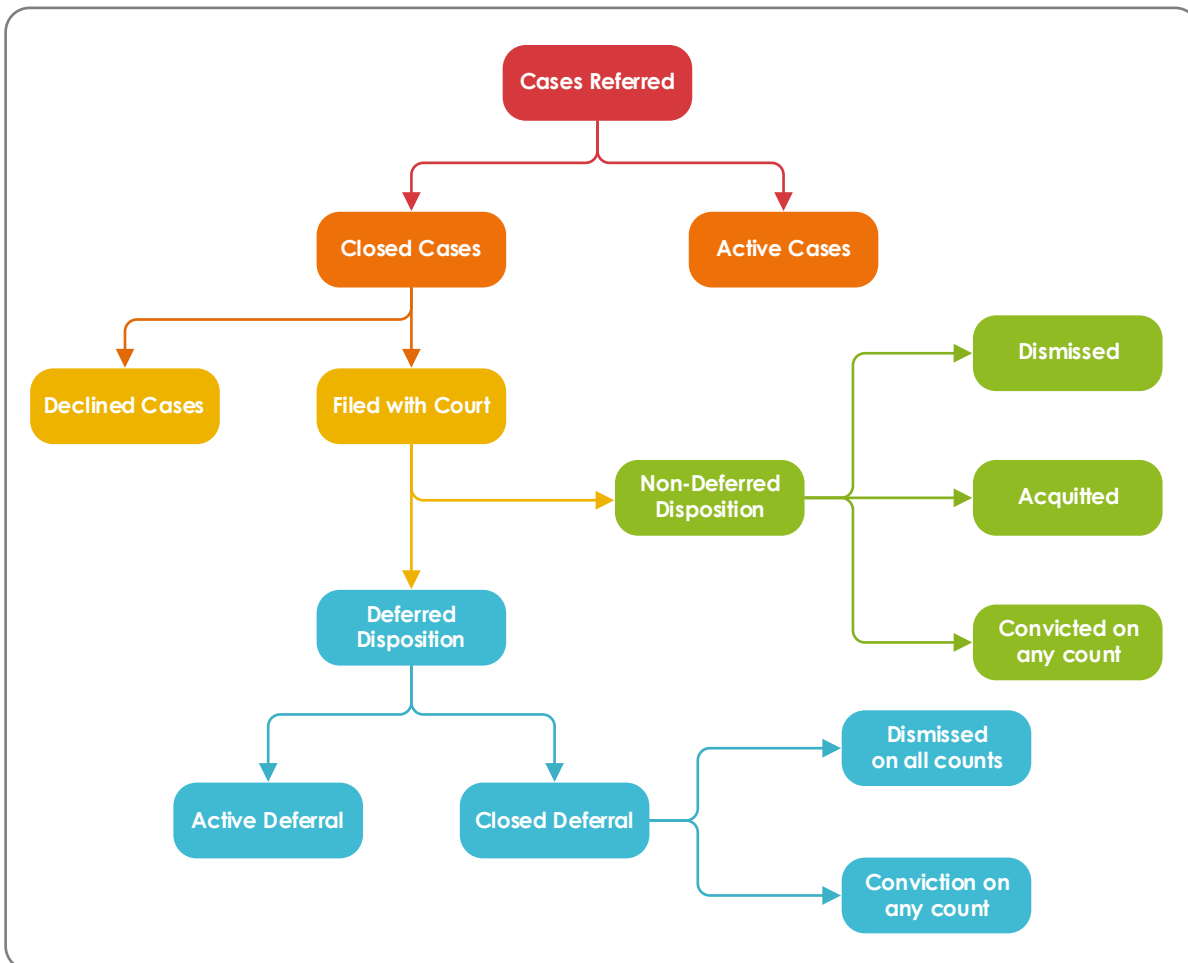

### Highest-Level Charge

To better describe case characteristics, the researcher team determined the highest-level charge for each case. The highest-level charge was identified by first finding the charge with the highest offense class. If the case had more than one charge with that class—for instance, a case with two Class D offenses—researchers selected the charge that appeared first on the charging instrument.

### Outcomes

A case outcome refers to how a case is resolved. To demonstrate the range of possible and actual resolutions, Figure A provides a visualization of the various case outcomes and how they relate to each other.

Figure A. Case Outcomes Flow Chart

Case outcomes were determined by the charge disposition and/or the case status.<sup>7</sup> First, individual charge dispositions were analyzed to determine which cases had at least one valid charge disposition (e.g., dismissed, plead guilty, etc.) and/or were marked in JustWare as utilizing a deferred disposition.<sup>8</sup> These cases were classified as *closed* and *filed with court*. Next, researchers identified cases *declined* by

<sup>7</sup> See Appendix G for list of case outcomes by charge disposition.

<sup>8</sup> Deferred dispositions are cases in which an agreement is reached that the relevant charge(s) may be dismissed or that the defendant may be given a lesser sentence assuming that they comply with the conditions of the agreement during a given timeframe.

prosecutors, meaning prosecutors decided to close the case without filing charges. This information was primarily gleaned from the case status listed in JustWare; however, there were district variations in how this data was entered. For example, most districts would enter a case status of 'declined' and leave the charge dispositions blank, while other districts would mark as a case as 'closed' and enter the disposition(s) as 'declined'. Therefore, declined cases also include cases in which the only charge disposition(s) listed are 'declined'. *Active cases* are those in which there was no outcome (e.g., *declined*, *valid disposition*, etc.) entered into the system at the time the data was queried.<sup>9</sup>

For those cases *filed with court*, researchers looked at the types of dispositions. For both *non-deferred* and *deferred dispositions*, cases with a conviction on any charge are categorized as *convicted*. If no charge(s) in the case resulted in conviction but did result in an acquittal, the case is considered *acquitted* (non-deferred only). *Dismissed* cases are those cases with a valid disposition of 'dismissed' but could not be classified as a conviction or acquittal. *Deferred dispositions* that have been dismissed or resulted in a conviction are considered *closed deferrals* while those without a final disposition are categorized as *active deferrals*.

### Juvenile cases

Juvenile cases include the cases handled within the juvenile justice system as well as cases in which the defendant was prosecuted as an adult but was under 18 years old at the time of offense.

---

<sup>9</sup> The data was queried on March 10, 2022.

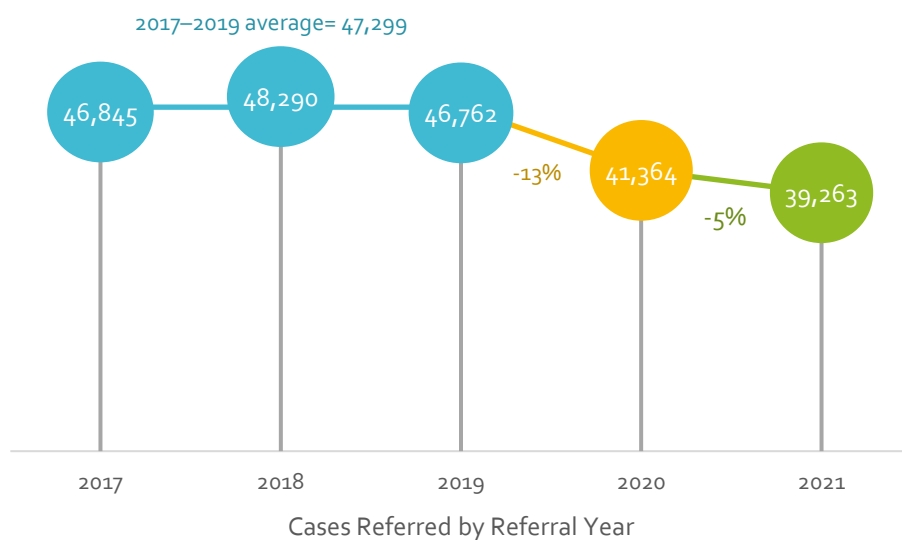

## CASES REFERRED

During the 5-year study period (2017-2021), a total of 222,524 cases were referred to Maine district attorneys. District 2, the most populous district in the state, had the largest number of case referrals during the 5-years with 19% of all cases, while District 7 had the fewest at 6%.

Cases Referred by District

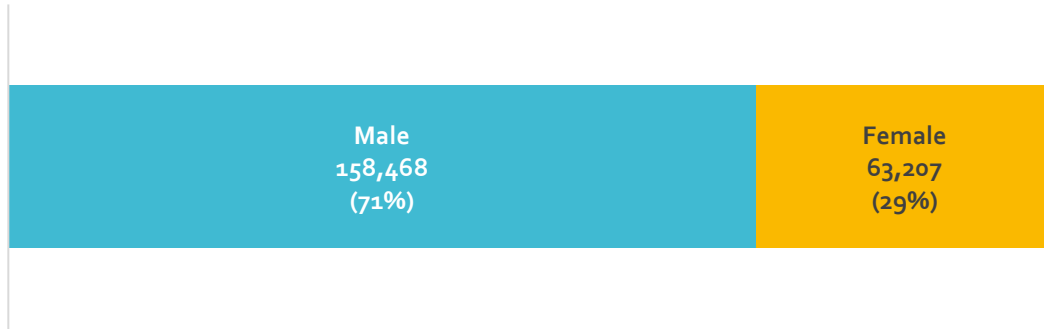

Between 2017 and 2021, the number of cases referred per year decreased by 16%. However, the yearly number of cases was relatively stable for the first three years of the study period, meaning the decrease was not a steady decline across the 5-year period but instead was a sudden drop beginning in 2020. This suggests case referrals were impacted by the onset of the COVID-19 pandemic in 2020 with the former 2017 to 2019 period being distinctly different than the latter years. Therefore, comparing the 2017–2019 average to 2020 can provide a better measure of COVID-19’s impact on case referrals. As shown in the table below, between the 2017–2019 pre-pandemic period and 2020 COVID-19 onset, the number of cases dropped by 13%, and decreased by an additional 5% between 2020 and 2021.

## DEFENDANT CHARACTERISTICS<sup>10</sup>

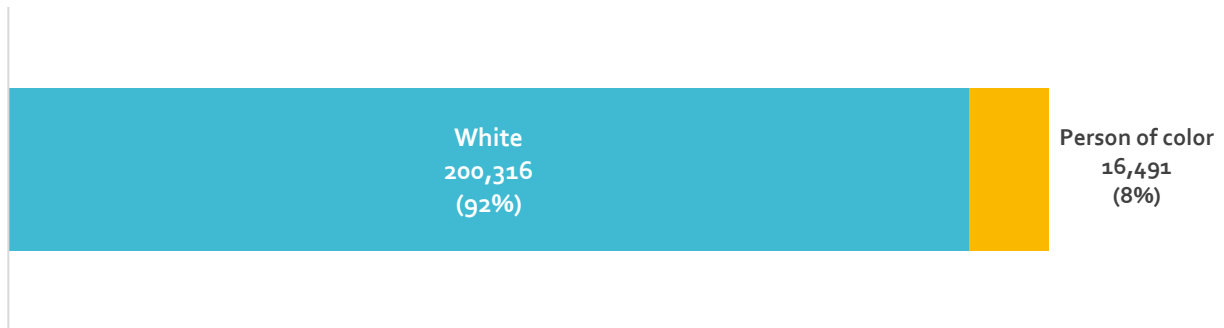

### Gender

For the 2017-2021 study period, the defendant was male in over two-thirds (71%) of cases referred to prosecutors while 29% were female.<sup>11</sup>

### Race/Ethnicity

The overwhelming majority of case defendants were white (92%). Only 8% of defendants were persons of color, however, this percent varied by district and ranged from a low of 3% in District 6 to a high of 13% in District 2 (Table A3).<sup>12</sup>

<sup>10</sup> Gender, race/ethnicity, and date of birth (which is used to compute age) comes from the initial police report.

<sup>11</sup> These percentages exclude cases where gender was unknown (n=849).

<sup>12</sup> These percentages exclude cases where race/ethnicity was unknown (n=5,717).

### Age

For the 2017-2021 period, defendant age in cases referred to the DAs ranged between 18 and 95 years. On average, defendants were 36.1 years old, which was slightly higher than the median age of 34 years old. As shown below, those aged between 25 and 34 made up the largest proportion of the study population at 34% while defendants aged 65 and older made up the smallest proportion at 3%.<sup>13</sup> There were slight variations by year (Table A2). Between 2017 and 2021, the percentage of defendants aged 18 to 24 decreased from 22% to 17% while those 35 to 44 increased from 21% to 27%.

### NUMBER OF CHARGES PER CASE

Over the five-year study period, 365,300 charges accompanied the cases referred to prosecutors. Approximately 63% of cases included one charge, 23% included two charges, and the remaining 14% of cases included three or more charges. Overall, there were an average of 1.6 charges per case between 2017 and 2021.

<sup>13</sup> These percentages exclude cases where age at time of charge was unknown (n=1,149).

## HIGHEST-LEVEL CHARGE

### Case Type

Case type is determined by the case’s highest-level charge. The figure below shows the case type and, when applicable, the subtype for each case referred during the study period. For instance, 39% of cases were for *motor vehicle offenses*. Over half of *motor vehicle* cases—or 22% of all cases—were for *operating after suspension (OAS)* and *operating under the influence (OUI)*. *Property offenses* accounted for 17% of all case types followed by *personal offenses*, which includes *domestic violence (DV)*, at 16%. The fourth most frequent case type was *violations* at 11%, with the vast majority of these being for *release violations*. Approximately 8% of charges were for *drugs/alcohol offenses* while *other offenses* and *offenses against the public* and made up the smallest proportions at 5% and 4% respectively.

\* Subcategories that account for less than 5% of total charges are not labeled here; however, this data can be found in Tables B2 and B3.

Analysis of the top three case types by prosecutorial district shows some variation across the districts. Districts 1 and 6 had the highest proportions of *motor vehicle cases* (47% and 45% respectively) but also the lowest *property case* rates, with both districts at 12%. The opposite was true for District 5 with the highest *property case* rate (22%) and the lowest *motor vehicle case* rate (28%).

### Highest-Level Charge Class

In nearly half (48%) of all cases referred to the DAs, the highest-level charge was a Class E offense. Overall, 83% of all cases included only misdemeanor-level charges (Classes D and E) while 17% of cases included at least one felony-level charge (Classes A, B, and C).

### Top Ten Highest-Level Charge Descriptions

The following table lists the top ten highest-level charges. In approximately 11% of all cases, *operating after suspension* was the highest-level charge, followed closely by *criminal OUI* (11%), and *theft by unauthorized taking* (9%). Overall, these ten charge descriptions appeared as the highest-level charge in 61% of cases.

Charge Description	Number of Cases (n=222,524)	
	N	%
Operating after suspension	24,887	11%
Criminal OUI	24,496	11%
Theft by unauthorized taking	19,276	9%
Violation of condition of release	17,215	8%
Domestic violence assault	13,236	6%
Unlawful possession of scheduled drugs	10,245	5%
Assault	7,749	3%
Operating without a license	6,888	3%
Operating an unregistered vehicle	6,828	3%
Criminal trespass	5,344	2%

## INDIVIDUAL CHARGES

### Charge Types

The following figure shows the charge type and, when applicable, subtype for each individual charge included in a case.<sup>14</sup> *Motor vehicle offenses* made up the largest proportion of charges (33%), which is over twice that of the next highest category, property offenses (16%). *Personal offenses*, accounted for 16% of all charges and was closely followed by *violations* at 15%, of which nearly all were for *release violations*.

For most case types and subtypes, the rates shown below are very similar to the rates described in the previous *Cases Referred* section, with the exception of the *motor vehicle* and *violation* categories. While approximately 14% of all charges were for a *release violation*, the previous section shows that *release violation* was the highest-level charge in only 9% of cases which indicates that *release violation* charges are often accompanied by additional, higher-level charges. On the other hand, 39% of cases had a *motor vehicle offense* as the highest-level charge, which is higher than the *motor vehicle* charges rate of 33%. Additional analysis found that the driving force behind this difference was that *motor vehicle* charges were less likely to be coupled with other charge types.

\* Subcategories that account for less than 5% of total charges are not labeled here; however, this data can be found in Tables A2 and A3.

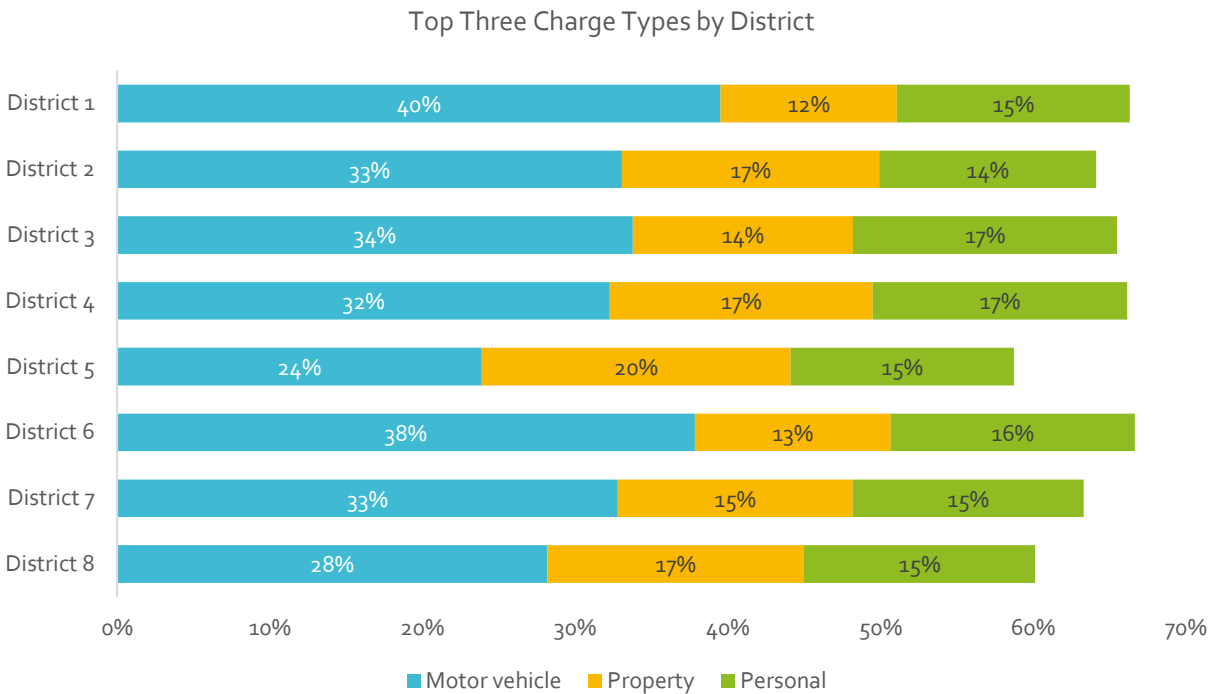

<sup>14</sup> For information about the offenses that fall within charge type and subtype, see Appendix B.

Charge type percentages were relatively similar from one year to the next with the exception of *release violations* (see Table B2). As shown in the below figure, the *release violation* rate rose from 12% to 17% during the study period, with the largest rate change occurring between 2019 and 2020 (13% to 16%). Interestingly, while the overall number of charges declined over the 5-year period, the number of *release violation* charges increased by 25%, going from 8,790 in 2017 to 10,910 in 2021 (Table B2).

Release Violation Rate by Year

Analysis of the top three charge types by district shows variations similar to those discussed in the Cases Referred chapter. Once again, the percentage of *motor vehicle* charges is highest in District 1 (40%) and District 6 (38%) but lowest in District 5 (24%). In turn, Districts 1 and 6 have the lowest percentage of *property* charges at 12% and 13% respectively, while District 5 has the highest percentage of *property* charges rate at 20%.

### Charge Class

The majority of charges (51%) were for Class E offenses, followed by Class D offenses at 33%. Combined, Class D & E offenses (misdemeanor-level offenses) accounted for 83% of case charges while the remaining 17% were for felony-level offenses (Class A, B, or C).

### Top Ten Charge Descriptions

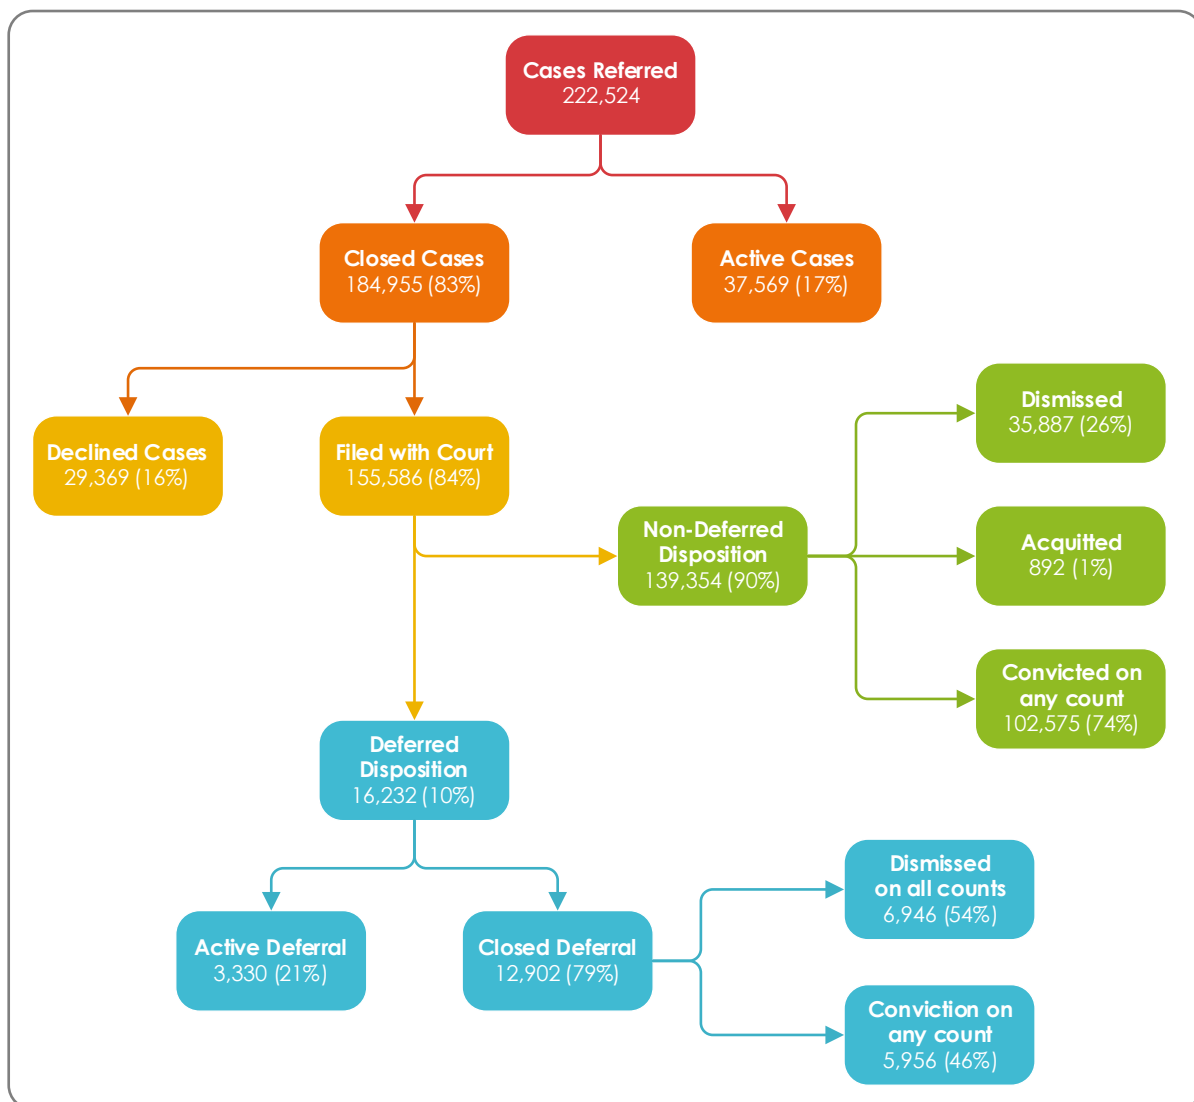

Between 2017 and 2021, *violation of condition of release* was the most frequently occurring case charge at 13%, followed by *operating after suspension* at 9% and *criminal OUI* at 8%. The top ten charge descriptions account for 58% of all charges.

Charge Description	Number of Charges (n=365,300)	
	N	%
Violation of condition of release	46,479	13%
Operating after suspension	31,520	9%
Criminal OUI	27,650	8%
Theft by unauthorized taking	27,177	7%
Unlawful possession of scheduled drugs	20,402	6%
Domestic violence assault	17,141	5%
Assault	11,846	3%
Criminal mischief	10,084	3%
Operating without a license	9,643	3%
Disorderly conduct	9,233	3%

# CASE OUTCOMES

A case outcome refers to how a case is resolved. To demonstrate the range of possible and actual resolutions, Figure 1 provides a visualization of the various case outcomes and how they relate to each other. At the first level are all 222,524 cases referred to prosecutors during the five-year study period. The cases referred are then split into two categories: active cases and closed cases (as of the time the data was queried).<sup>15</sup> Likewise, closed cases are split into either declined cases or cases filed with the court. Finally, the cases filed with the court flow into the individual types of case dispositions. Each subsection in this chapter details each of the outcomes shown below.

Figure 1. Case Outcomes Flow Chart, 2017–2021

<sup>15</sup> Prosecutorial data was queried on March 10, 2022.

## CASE STATUS

To appropriately evaluate case outcomes, researchers first needed to determine if the case was active or closed at the time the data were queried.<sup>16</sup> Overall, 184,955 cases (or 83% of all cases referred) were closed while only 18,575 (17%) were still active. Due to the amount of time it can take for an outcome to be reached, the case closed rate varies by case referral year. As shown below, cases referred between 2017 and 2019 all have case closed rates above 90%, while 2020 and 2021 have lower rates at 78% and 53% respectively.

## CLOSED CASES

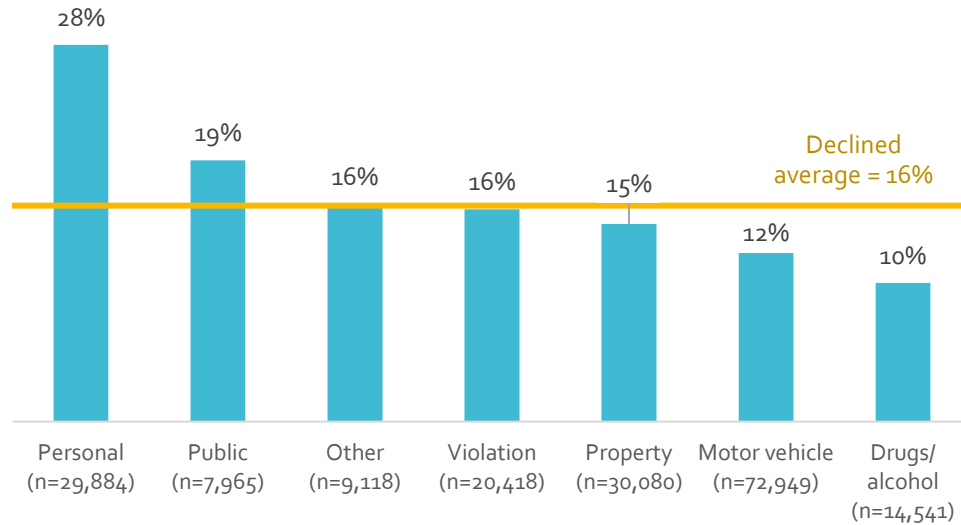

A case can either be filed with the court or declined. For purposes of this study, researchers only reviewed closed cases when determining which cases were declined or filed with court. Of the 184,955 cases closed during the study period, 155,586 (or 84%) were filed with the court while the 29,369 (16%) remaining cases were declined. However, these rates varied significantly by referral year, case type, and prosecutorial district. As shown in the *Cases Declined by Referral Year* chart, the 2017–2019 pre-pandemic period’s percentage was stable, ranging between 11% and 13%, but by 2021 the rate had more than doubled to 32%, or nearly a third of all closed cases in 2021.

Cases Declined by Referral Year

<sup>16</sup> For the purpose of this study, closed cases must have had at least one charge with an associated disposition at the time the data was queried (March 10, 2022).

Likewise, cases in which the highest-level charge was a *personal* offense had a high proportion of cases declined at 28% while *drugs/alcohol* cases had a much lower rate at 10%. Finally, the cases declined rate varied across the prosecutorial districts, ranging from a low of 8% in District 8 to a high of 27% in District 4 during the five-year study period (Table C2).

Cases Declined by Case Type

## CASES FILED WITH COURT

### Deferred Dispositions

As shown in the *Case Outcomes Flow Chart* (Figure 1), cases were grouped into two categories: deferred dispositions and non-deferred dispositions. Deferred dispositions are cases in which an agreement is reached that the relevant charge(s) may be dismissed or that the defendant may be given a lesser sentence assuming that they comply with the conditions of the agreement during a given timeframe—for example, not committing any new criminal offenses over a 6-month or 12-month period. Overall, 10% of cases resulted in a deferred disposition. This rate varied by prosecutorial district and by case type. For instance, District 5’s deferred disposition rate was 8 percentage points below the statewide average at 2% while District 6’s rate was 8 percentage points above the average at 18% (Table C2). Similarly, the deferred disposition rate by case type ranged from 4% for *violation* cases to 20% for *personal* cases (Table C3).

Deferred Case Outcomes

Before analysis of deferred disposition outcomes could be conducted, researchers needed to determine whether the deferred disposition term (i.e., the given timeframe) was completed.<sup>17</sup> Approximately 79% of deferred cases were completed at the time the data were queried. Like the *Case Status* subsection, completion rates varied by year with more recent years (25% in 2021) being lower than earlier years (96% in 2017).<sup>18</sup>

Overall, 54% of completed deferred cases resulted in a dismissal. The dismissal rate did fluctuate by district. Noticeably, District 1 and District 4 had higher dismissal rates while Districts 8 (40%), District 6 (39%), and District 5 (25%) had lower rates. Dismissal rates by case type were relatively consistent with overall average, with the exception of *property* cases, which had the highest percentage of deferred disposition dismissals at 65%.

<sup>17</sup> For the purposes of this study, a deferred disposition case is completed if any of the case’s associated charges have a final disposition. It is possible for a defendant to be convicted on some charges but agree to a deferred disposition for other charges. These cases would be classified as closed regardless of whether the end of the deferred disposition time period had been reached. Likewise, the deferral outcome would be *convicted*, even if all conditions were satisfied.

<sup>18</sup> See Table C1 for deferral completions by referral year.

### Non-Deferred Dispositions

The remaining 90% of cases filed with the court did not result in a deferred disposition. Of these 139,354 non-deferred disposition cases, nearly three-quarters (74%) resulted in a conviction, 26% in a dismissal, and only 1% resulted in an acquittal.

Non-Deferred Outcomes

The dismissal and conviction rates varied by referral year and by prosecutorial district. For example, between 2017 and 2020, the proportion of dismissed cases steadily increased from 19% to 35% before slightly decreasing to 31% in 2021. This trend appears to have begun prior to the COVID-19 pandemic. As shown below, the pre-pandemic period (2017 to 2019) saw a 9-percentage point increase of dismissed cases. Additionally, despite the overall number of disposed cases decreasing between 2017 and 2019, the number of cases dismissed grew by 2,669 which represents a 19% increase (Table C1).

Dismissals by Referral Year

When looking at conviction rates by prosecutorial district for the 2017 to 2021 study period, District 7 had the highest conviction rate at 84%, followed closely by Districts 6 and 8 (80% each). On the other hand, District 1 and District 2 had the lowest rates (63% and 68%). Interestingly, for most districts the conviction rates decreased as the total number of cases disposed increased. For example, District 7 had the lowest number of disposed cases (1,411), while Districts 1 and 2 had the highest (7,555 and 8,543 respectively).

# JUVENILE CASES

For the purposes of this report, juvenile cases are those cases handled within the juvenile justice system as well as cases in which the defendant was prosecuted as an adult but was under 18 years old at the time of offense. Between 2017 and 2021, a total of 10,127 juvenile cases were referred to prosecutors. One-quarter (25%) of all juvenile cases were referred to District 2 prosecutors, followed by District 3 at 20%. District 7 received the smallest proportion of juvenile cases at 4%.

Juvenile Cases by District

The number of juvenile cases referred per year decreased significantly during the COVID-19 pandemic 2020–2021 period. As shown in the chart below, the average referred per year decreased from 2,291 cases during the 2017-2019 period to 1,627 cases in the 2020-2021 period. Overall, this represented a 29% decline in juvenile cases.

Juvenile Cases by Referral Year

## NUMBER OF CHARGES PER JUVENILE CASE

Approximately 70% of juvenile cases had one charge, 18% had two charges, and the remaining 12% had three or more charges. Overall, there were an average of 1.6 charges per case between 2017 and 2021, which is identical to the average number of charges per adult case.

## CHARGE CLASS

### Juvenile Charge Class

The classification of a case is determined by the highest-level of offense. Approximately 20% of juvenile cases included a felony-level charge (Class A, B, or C), being slightly higher than the adult felony-level case rate of 17%. The remaining 80% of juvenile cases included only misdemeanor-level charges (Class D or E).<sup>19</sup>

<sup>19</sup> Differences between the percentages described and the percentages in the chart are due to rounding.

### Juvenile Case Type

Similar to adult cases, juvenile case type is determined by the case’s highest-level charge. The figure below shows the juvenile case type and, when applicable, the subtype for each juvenile case referred during the study period. *Property* cases made up the largest portion of juvenile case types at 35%, but was only slightly higher than *personal* cases at 32%. Overall, these two case types made up approximately two-thirds of all juvenile cases. These findings are very different than the adult case type findings, where *motor vehicle* cases made up a larger proportion than *property* and *personal* cases combined. Additionally, approximately 6% of juvenile cases were classified as *sexual assault* compared to only 1% of adult cases.

## DISCUSSION

This analysis of Maine’s 2017-2021 prosecutorial data established statewide and district level baseline figures and trends that provide insight on various types of criminal cases, charges, and outcomes. As will be detailed below, the analysis brought forward case, charge, and outcome key findings that can be used to inform each DAs ongoing and future prosecutorial strategies and quality improvement activities. However, as researchers mined the JustWare-generated dataset, it became clear that certain data points could not be included in the analysis as originally designed because the data are not currently tracked by DAs or are not tracked consistently across districts. Therefore, key findings related to data quality and data practices are also addressed.

### KEY FINDINGS

#### Cases Referred and Associated Charges

1. *Case referrals were directly impacted by the COVID-19 pandemic.*

The COVID-19 pandemic greatly altered day-to-day practices in all facets of life and the criminal justice system was no exception. During the pre-pandemic 2017 to 2019 period, the number of cases referred were relatively consistent and averaged 47,299. In 2020, the number of case referrals dropped to 41,364, which represented a 13% decrease from the 2017–2019 average. The 2020 decrease makes logical sense as society at large spent much of the year in isolation, law enforcement had less opportunity to interact with the population and, in turn, referred less cases to prosecutors.

Of note is that the number of referrals continued to decline in 2021. This finding is surprising because, even though many were still taking precautions in early 2021, the COVID-19 vaccine became widely available and consequently a degree of normalcy returned. Therefore, if the drop was solely because of the pandemic, we would expect the 2021 case referrals to be higher than 2020. Instead, between 2020 and 2021 the number of referrals decreased by 5% and therefore indicating that other factors within the criminal justice system (e.g., changes to policies and practices) were also contributing to the decreased case referrals.

2. *Motor vehicle cases take up the largest proportion of the prosecutorial workload.*

Analysis of case types (determined by the highest-level charge) found 39% of all cases referred to prosecutors were for *motor vehicle* offenses. Thus, motor vehicle cases make up the largest proportion of the prosecutorial workload. Breaking this apart further shows that 11% of cases had *operating after suspension* (OAS) as its highest-level charge and an additional 11% of cases had *operating under the influence* (OUI) as the highest-level charge. In practical terms, this means one out of every five cases referred to a prosecutor is either for an OUI or OAS offense.

3. *The number of violation charges increased over the study period, while all other charge types decreased.*

Nearly every charge type decreased over the 5-year period, however, the number of release violations increased by 2,120 charges. Specifically, release violations rose from 12% of total charges in 2017 to 17% in 2021 and the overall number of release violations increased by 25%, from 8,790 in 2017 to 10,910 in 2021.

4. *Sexual assault cases were more prevalent in juvenile cases compared to adults.*

As one would expect, the case type proportions for juvenile cases are distinctly different from adult case types because minors have different rights than adults and commit crimes relate to those abilities. For example, *property* cases made up the largest portion of juvenile cases (35%) whereas *motor vehicle* cases, including OUIs and OASs, made up the largest for adults (39%). This can be explained in part by the fact that most adults can legally drive and consume substances while only some minors drive, and none can legally ingest drugs or alcohol. However, an unanticipated difference between juvenile and adult case types that the analysis revealed is approximately 6% of juvenile cases were classified as *sexual assault* compared to only 1% of adult cases. This means sexual assault cases were more likely in juvenile cases than adult cases during the study-period.

## Outcomes

5. *The number of declined cases drastically increased during the COVID-19 pandemic.*

The 2017-2019 pre-pandemic period's percentage of cases declined was relatively stable, ranging between 11% and 13%. However, in 2020, this proportion grew to 20% and, in 2021, further increased to 32%. This increase in declined cases between the pre-pandemic and pandemic periods was likely influenced by the court backlog here in Maine and throughout the United States. In response to this backlog, prosecutorial districts across the state instituted new policies and practices, many of which remain in place as of 2023. Subsequently, analysis in future years could continue to show an elevated cases declined rate.

6. *Personal cases are the most likely cases to be declined for prosecution, while drugs/alcohol cases are the least likely to be declined.*

Overall, 16% of closed cases were declined by prosecutors. However, cases in which a *personal* offense was the highest-level charge had a significantly higher rate of being declined (28%) while *drugs/alcohol* cases had the lowest rate at 10%. This finding is most likely explained by the nature of the cases themselves. Personal cases, which are typically violent crimes, are harder to prove beyond a reasonable doubt, especially when specific witness testimony is needed.

7. *The use of deferred dispositions is heavily influenced by the prosecutorial district in which the case was referred.*

Approximately 10% of cases filed with the court resulted in a deferred disposition during the study period. However, the use of deferred dispositions ranged greatly by prosecutorial district. While all other districts' deferred disposition rates were relatively similar (ranging from 9% to 13%), only 2% of District 5's filed cases resulted in a deferred disposition while District 6 used a deferral in 18% of filed cases.

8. *Over the course of the five-year study period, the number of cases dismissed grew by 19%.*

The percent of cases filed with court that were dismissed increased from 19% in 2017 to 35% in 2020 before slightly decreasing to 31% in 2021. Of note is that this increase began prior to the COVID-19 pandemic.

9. *Nearly three-quarters of closed cases resulted in a conviction.*

Between 2017 and 2021, conviction rates ranged from 63% to 84% and varied by district, for an overall average of 74% of cases resulting in a conviction. While conviction rates are often used as an indicator to measure performance, the 2017-21 data suggests conviction rates are inversely related to the population size of the prosecutorial district, with more populous areas having lower conviction rates and vice versa.

## Data Quality and Practices

10. *Data entry standards vary from one prosecutorial district to the next.*

All eight districts use JustWare, a case management system, to track cases as they wind through the prosecutorial process. For many of the data base fields, information is entered in a relatively uniform fashion across districts and, because the data entry was accurate, complete, consistent, and reliably tracked by all districts, allows for the data to be aggregated across districts and analyzed. That said, some data entry standards varied from one prosecutorial district to the next. Hence, the MPA and research team had certain areas of interest they were unable to analyze because of either low data accuracy or too little data. For example,

- a) **Low data accuracy:** DAs use of special initiatives was not tracked consistently. While it is likely the case that practices related to special initiatives differ between districts, these initiatives were not able to be explored because some districts did not track this in the JustWare System. Specifically, the research team was not able to look at restorative justice, drug courts, mental health courts or veteran’s courts because the information was not consistently entered. Likewise, they were unable to determine certain types of convictions that would have been of interest. For instance, whether a case went to trial could not be included in the analysis because of irregular disposition data entry practices.
- b) **Lack of data:** Even though JustWare contains case information about victims, the number of victims supported by victim-witness advocates could not be determined because the only information being captured in the database is whether a victim-witness advocate attempted to contact a victim. In that same vein, researchers were able to determine if a deferred disposition had a conviction or dismissal but not able to determine if it had a successful outcome due to the data not being accessible.

## RECOMMENDATIONS & LOOKING FORWARD

---

The recommendations offered in the final section of this report are both specific and broad. This is because they address current prosecutorial data practices happening in Maine while also considering data practices happening nationally. Additionally, the recommendations are interconnected and require a multi-year, incremental planning and implementation approach that is lightly explored here. Therefore, it is the Maine SAC's hope that this final section provides foundational knowledge and resources for Maine's DAs to consider as they continue their ongoing data-informed decision-making and quality improvement efforts. The recommendations are:

1. Standardize data collection and input practices to improve data output.
2. Develop key performance indicators that emphasize the goals and values of DAs as well as the communities they serve.
3. Meet regularly with data specialists to discuss data quality and performance metrics.
4. Expand opportunities for state-wide data collaboration.
5. Develop and maintain an interactive data dashboard.

### Standardize data collection and input practices to improve data output.

Maine's eight prosecutorial districts enter case information in a relatively uniform manner, and this means data can be aggregated and analyzed to provide insight into processing outcomes, like number of convictions obtained. However, aggregate and district-specific information about special initiatives (i.e., restorative justice, drug courts, mental health court, and veteran's court), trials, the successful outcomes of deferred dispositions, and victim-witness support cannot be included in such trend analyses due to low data accuracy or a lack of data. It is recommended that the eight prosecutorial districts take a coordinated approach to standardize data collection and input practices in the areas of special initiatives, deferred dispositions, and victim-witness support as well as establish and employ consistent disposition data entry practices. Doing so will enable data about these prosecutorial strategies and tools to be included in future assessments of state-wide prosecutorial justice efforts and to support data-informed decision making around current and future practices and policies.

### Develop key performance indicators that emphasize the goals and values of DAs as well as the communities they serve.

Recent literature shows that nation-wide, prosecutorial success is becoming less dependent on processing outcomes. More recently the field of prosecution has begun to focus on:

- victim, offender, and community well-being;
- if decisions are being made that promote justice and equity; and
- if limited resources are being used effectively.<sup>20,21</sup>

For example, in 2017, researchers from the Florida International University and Loyola University of Chicago established *Prosecutorial Performance Indicators (PPIs)* to better understand prosecutorial efforts and communities' health and well-being. These PPIs were developed because studies consistently showed that, on their own, processing outcomes (e.g., conviction rates) do not provide meaningful insight into prosecutorial justice (i.e., if a conviction is the most appropriate outcome).<sup>22</sup>

<sup>20</sup> Kutateladze, B. L., Meldrum, R., Richardson, R., et.al. (2018). *Prosecutorial attitudes, perspectives, and priorities: Insights from the inside*. MacArthur Foundation. <sup>21</sup> Pearson, M. V. (2021). *Data as a Tool for Racial Justice*. *Criminal Justice*, 36(1), 4-5.

<sup>22</sup> Visit <https://prosecutorialperformanceindicators.org/> to learn more.

This 5-year trended data report initiated by the MPA aligns with the larger field's effort to promote community safety, health, and well-being. However, current data collection practices paired with a lack of key performance indicators limit how Maine DAs can utilize their data to move the needle from traditional processing outcomes to PPI outcomes that focus on the cumulative effect of prosecution over time. Therefore, in addition to the data practices detailed elsewhere in this section, the development of performance indicators that more fully track and emphasize the goals and values of DAs as well as the communities they serve is recommended. Doing so will also facilitate Maine DAs alignment with national best practices.

#### Meet regularly with data specialists to discuss data quality and performance metrics.

Prosecution offices collect and use data throughout the case decision-making process to guide prosecutorial practices. That said, recent studies have found that prosecution offices face significant barriers to using data such as knowing what data to collect; knowing how to maintain data accuracy and timely reporting given limited resources; and determining how to generate transparent, accessible, and public-facing data.<sup>23</sup> Therefore, it is recommended that the MPA and Maine DAs continue to partner with data specialists to discuss data quality and performance metrics in order to help standardize and streamline data practices that will ultimately help prosecutors measure progress towards their goals.

#### Expand opportunities for collaboration on state-wide data engagement.

While developing key performance indicators and standardizing data practices are foundational to a data-informed approach, state-wide data engagement is also a key. DAs and their staff have limited resources and a myriad of other responsibilities that leave limited time to engage with stakeholders on data collection and interpretation. Therefore, the recommendation to expand opportunities for collaboration around state-wide data pinpoints two specific opportunities that are central to leveraging data.

First, once standardized data collection and input practices are established, all prosecutorial staff should receive training on the established methods. Then, training opportunities and related protocols should be made available to new DAs and staff on a regular basis. To help facilitate these trainings on data practices, the MPA may choose to designate a "training coordinator" among its members.

Second, DAs should collectively reflect on state-wide data practices at an annual meeting. While collecting data can make a huge difference in quality improvement efforts, it is essential that DAs are able to confirm that data collection practices are taking place and then reflect on what is going well and what data practices may need to change. Doing this collectively enables everyone to weigh in and end up on the same page so that training protocols can be updated accordingly.

### Develop and maintain an interactive data dashboard.

Prosecutorial data dashboards help collate data for internal data tracking in a format that is accessible and customizable for the user. National trends show that public-facing dashboards are also now regularly used by prosecutors' offices as a transparency and accountability tool to proactively communicate information about efforts and outcomes to the public.<sup>24</sup> It is recommended that the MPA, in collaboration with the Maine SAC, develops an interactive data dashboard that will enable prosecutors to mine data in real time that meet their specific needs as they track performance metrics and make data informed decisions. The MPA would decide what data to include in this database and what data would be made available to the public. Like the aims of this report, a dashboard would enable the public to better understand how limited public resources are being used and support meaningful insight and dialogue about current prosecutorial justice practices.

17-A M.R.S. §1051–§1059	Weapons
<i>**all other offenses not listed here</i>	

## APPENDIX G. OUTCOMES BY DISPOSITION

Outcome	Charge Disposition (or other indicator)
<b>Active</b>	
	Administrative release*
	Continued for sentencing*
	Filed
	Missing disposition
	Pled by authorization
	Pled by waiver
	Pled not guilty
	Sentenced*
	Unconditional discharge*
<b>Declined</b>	
	Declined
	<i>Cases marked as declined in JustWare</i>
<b>Valid Disposition</b>	
<i>Acquitted</i>	
	Accord and satisfaction
	Criminal forfeiture
	Default judgment
	Denied
	Found not guilty
	Grand jury no bill
	Judgment of acquittal
	Not criminally responsible
	Not criminally responsible by reason of insanity
	Not guilty - bench trial
	Not guilty - jury trial
	Not guilty by reason of insanity
	Permanent transfer out of county
<i>Convicted</i>	
	Admitted guilt
	Alford plea
	Deferred disposition terminated ( <i>deferred dispositions only</i> )
	Found guilty
	Found guilty - bench trial
	Found guilty - jury trial
	Found guilty by plea
	Offense committed - bench trial
	Offense committed by admission
	Pled guilty
	Pled Nolo Contendre
	Pled to infraction
	Probation violated

\* *Disposition indicates sentencing, which (for purposes of this study) is not a valid disposition and thus classified as active.*

**Appendix G. Outcome by Disposition (cont.)**

Outcome	Charge Disposition
Valid Disposition (cont.)	
<i>Dismissed</i>	
	Court dismissal of filing
	Deferred disposition dismissal ( <i>deferred dispositions only</i> )
	Dismissed by court
	Dismissed by prosecutor
	Dismissed case indicted
Deferred Disposition	
	<i>Cases marked in JustWare as utilizing a deferred dispositions</i>
